

G5ANT-5A4.17M-X ANTENNA FAMILY

Low-Profile GNSS Survey Antenna

The G5Ant-5A4.17M-X product family is a multi-frequency antenna that provides assured Global Navigation Satellite Signal (GNSS) signal reception. The Antcom “G5” antenna operates in five frequency bands and includes support for GLONASS L1, GPS L1, L-Band, L2 GLONASS and L2 GPS. The low-profile enclosure simplifies integration into your product application. The included ground plane ensures consistent GNSS performance and is well-suited to survey applications.

The product family is available in passive and active (amplified) configurations. The active configurations offer 2-stage integrated bandpass filtering for high out-of-band rejection and limiter diodes to protect sensitive receiver electronics. The passive configurations are best suited to applications where the antenna is located close to the GNSS receiver and offers the lowest insertion loss to minimize the noise figure of your system.

Antcom can customize this product family to meet your specific requirements. Please contact us for more information about customization options.

BENEFITS

- Low profile for ease of product integration
- Many standard options available, and customizable if required

FEATURES

- Multi-frequency, multi-constellation for assured GNSS reception
- Integrated ground plane for consistent GNSS performance
- Passive or active (amplified) configurations available
- Connector options available
- Paint color options available
